FEATURES OF THE HOUSING

Hotwire anemometer

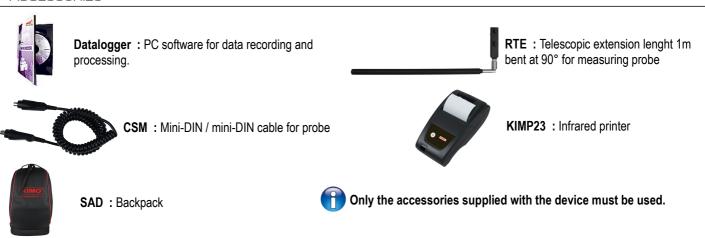

A wire is continuously heated at a superior temperature than ambient and continuously cooled by airflow. Constant temperature is maintained by a regulation circuit. The heating current is proportional to the airflow velocity.

Thermometer : Pt100 probe

Pt100 is a resistance with a positive temperature coefficient which varies according to the temperature. The higher the temperature is, the more the value of the resistance increases. ie : for $0^{\circ}C \approx 100 \Omega$ - for $100^{\circ}C \approx 138,5 \Omega$.
